FULL-FUNNEL OPTIMIZATION & BRAND DIFFERENTIATION

Visual-First Strategy for Premium Luxury Positioning

Context: Luxury Segmentation

The Challenge

Tasked with digital campaigns for Genesis (Sep 2016), needing a distinct approach from the parent brand (Hyundai) to establish premium positioning.

The Constraint

Standard automotive media mix (Search-heavy approach) could not convey the luxury aesthetic required for high-end consumers.

Strategic Pivot

Shifted from standard text-based formats to high-impact visual experiences to evoke emotional connection.

Visual-First Rationale

Insight: "Luxury brands sell emotion, not specs."

Decision: Allocated **90% to Visual Formats**

(Display/Video) to build premium perception, reserving only **10% for Brand Search** protection.

Platform Evolution

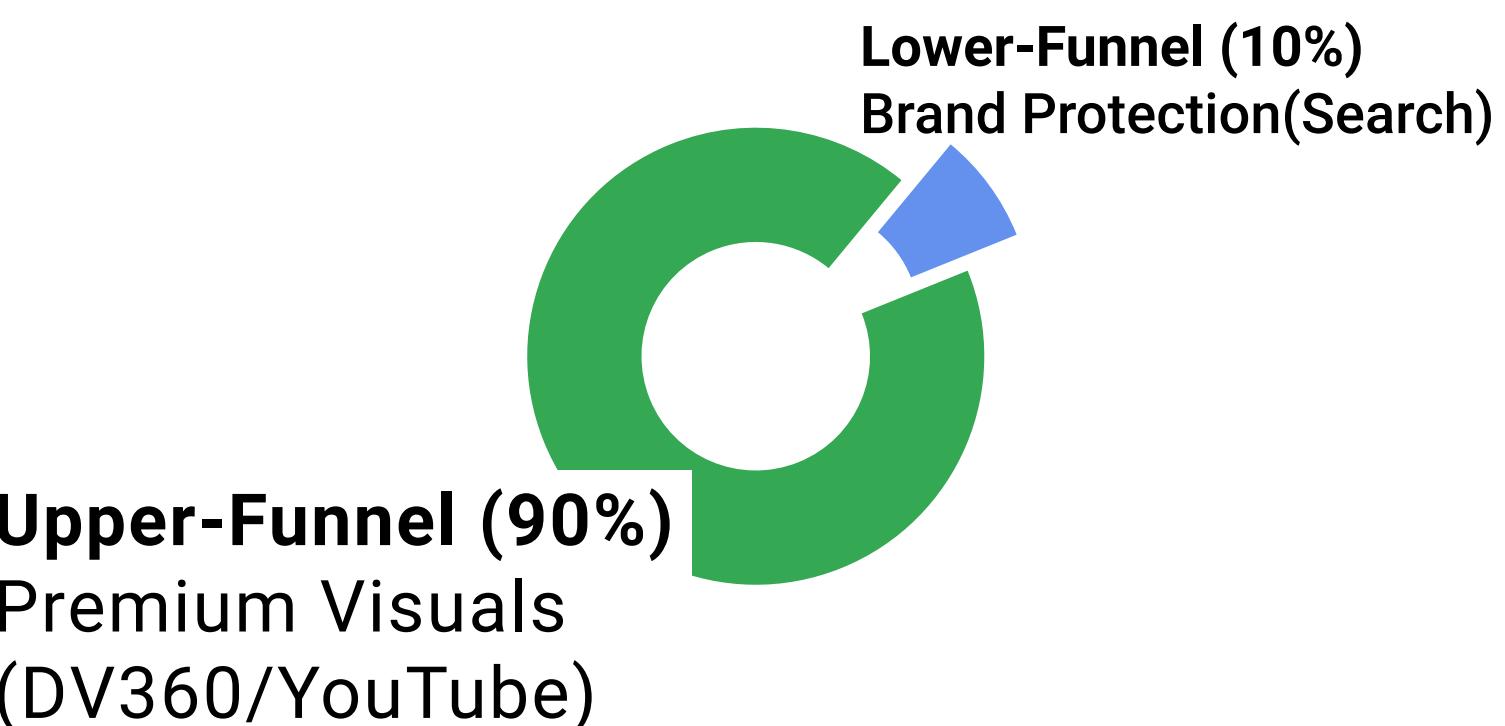

Phase 1 (Google Ads)

Utilized Lightbox Ads (CPE Model) for high engagement

Phase 2 (My Proposal)

Proposed & Implemented DV360 to access Brand-Safe, Premium Inventory unavailable on standard networks

Execution

Platform Strategy

- **DV360 (90%):** Targeted PMP (Private Marketplace) & HD Inventory for premium brand safety.
- **Google Ads (10%):** Strictly managed for high-intent brand capture.

Key Results

- **92% Cost Efficiency:** Achieved \$0.05 Avg. CPC via programmatic optimization.
- **4.3M+ Engaged Audience:** Delivered massive reach in premium environments.
- **Successful Differentiation:** Established a distinct luxury identity separate from the parent brand.

How This Applies to LegalZoom

- **High-Intent Segmentation:** I apply premium vs. mass-market segmentation to LegalZoom by prioritizing users facing **high-risk legal decisions**, where trust and clarity drive conversion quality and long-term value.
- **Visual Trust Signals:** In legal services, high-fidelity creative functions as a **credibility signal**, reducing perceived risk and accelerating confident decision-making.

PROGRAMMATIC TRAFFIC QUALITY & RISK CONTROL

Protecting LegalZoom's Customer Acquisition Efficiency from Invalid Demand

Context:

The “FRAUD TAX”

The Scope

Managed **\$2.5M+** in programmatic spend, maximizing efficiency solely within the **Open Exchange** environment through aggressive optimization.

The Problem

Initial audits detected anomalous placements spiking to **5%+ CTR** in low-quality apps, draining daily budgets within hours.

- Impact:** These placements consumed disproportionate daily budget within hours, leaving no room for legitimate publishers.

The Goal

Implement a “**Traffic Validation Protocol**” to protect client investment and reward legitimate publishers.

Active Quality Control Framework

Detection Criteria (Red Flags)

- CTR > 1.0%:** Flagged for immediate manual review (3x Industry Avg of 0.35%)
- Zero Conversions:** High click volume but 0% Conversion Rate (Empty Spend)
- Budget Velocity:** Single app consuming >20% of daily spend rapidly

Weekly Audit Process

- MONITOR:** Identify high-velocity budget drainers
- VERIFY:** Manually inspect app environment for “Fat Finger” placements (accidental click traps)
- BLOCK:** Add confirmed low-quality apps to the Global Exclusion List

The Efficiency Formula

IMPACT: CPC \$0.66 → \$0.05 (92% Cost Reduction)

Key Results

- 92% Cost Efficiency:** Achieved **\$0.05 Avg. CPC** by eliminating fraudulent inventory
- Quality Traffic Protection:** Systematically removed anomalous placements, protecting the budget
- 4.3M+ Validated Traffic:** Secured high-volume traffic that passed behavioral validation standards

Strategic Application & Scalability (LegalZoom Use Case)

ECOSYSTEM HEALTH = BUSINESS GROWTH

The Universal Challenge: In legal services, invalid or low-intent traffic doesn't just waste spend — it distorts funnel metrics, inflates CAC, and degrades LTV forecasting..

My Approach:

- Signal Hygiene:** Apply anomaly detection to identify traffic misaligned with genuine legal intent
- Intent Validation:** Optimize toward **verified engagement signals**, not surface-level clicks
- Growth Objective:** Ensure acquisition dollars flow to users most likely to convert, retain, and generate long-term value

Conversion Architecture & Performance Tracking

End-to-End Data Pipeline for Multi-Channel Reporting

The Challenge: Beyond “Clicks”

The Problem: Optimizing solely for “Clicks” brought low-quality traffic with zero engagement

The Solution: Engineered a “Dual-Track” Framework using a Unified Targeting Structure across two distinct optimization goals to isolate performance variables

Dual-Track Optimization Framework

Track 1: Soft Conversion (Traffic)

- Goal: Maximize Qualified Traffic
- KPI: Landing Page View (Duration >10s)

Track 2: Hard Conversion (Action)

- Goal: Maximize Business Results
- KPI: HVA (High-Value Action-Build & Price, etc)

SHARED TARGETING

Strategy: Segregated audiences into 3 standardized groups for precise comparative analysis

- **Remarketing:** High-intent site visitors
- **3rd Party Audiences:** In-Market Auto Shoppers
- **DV360 Bid Manager Audiences:** Google Intent Signals

THE IMPACT

- **CTR Growth:** +2,044% (0.18% → 3.86%)
- **CPC Efficiency:** -92% (\$0.66 → \$0.05)
- **Quality Volume:** 158K+ High-Intent Clicks

Building on Page 3's Quality Foundation

After eliminating fraudulent traffic (Page 3), I evolved the strategy to optimize for what matters: Conversions, not just Clicks

Campaign Evolution Highlights (2021-2025)

Display CTR Growth
2,044.44%
0.18% (2021) → 3.86% (2025)

Display CPC Reduction
-92.42%
\$0.66 (2021) → \$0.05 (2025)

CTV CPM Efficiency
-28.52%
\$8.87 (2024) → \$6.34 (2025)

YouTube Views Growth (2021-2025)

88.07%

372,516 views (2021) → 700,601 views (2025)

Data Notes: Campaign durations vary (14-29 days). Metrics as reported from client performance reports (2021-2025).

Real-time Performance Scorecard tracking key efficiency metrics (CTR, CPC) across campaign evolution (2021-2025)

CAPABILITY	TOOLS & PLATFORMS
Performance Tracking	GA4, GTM, DV360 Reporting
Data Visualization	Looker Studio, Tableau
Analysis & Opt.	SQL, A/B Testing, Custom Bidding Rules

How this Applies to LegalZoom

Dual-Funnel Architecture for Scalable Growth

Universal Challenge: Distinguishing General Researchers from Ready-to-File Customers

My Approach: Apply the Dual-Track Logic:

- Track 1 (Awareness): Target broad legal service interest (LLC formation guides, Legal resource views)
- Track 2 (Action): Focus budget on high-intent actions (Business Formation starts, Legal Consultation requests)

Result: Maximize ROI by focusing spend where it drives real partnership value, not just volume

Financial Ownership & Crisis Management

Context: Pandemic Pivot (Dec 2021)

The Scenario: In December 2021, due to COVID-19 restrictions, unused offline event budgets were suddenly reallocated to digital marketing.

The Challenge: I had to execute a record-breaking \$90,572 surplus (approx. 4.5x normal monthly spend) within a single month.

The Constraint: Year-end timing meant limited inventory availability and high competition, requiring **autonomous decision-making** without standard approval cycles.

The Decision: I took **full fiduciary ownership** to deploy the funds, pivoting from “Event Marketing” to “Aggressive Digital Acquisition.”

Execution

Strategy: “Controlled Velocity Scaling”

Instead of recklessly “dumping” budget, I executed a **Bid-to-Volume Optimization Strategy** to balance speed and efficiency.

Step 1: Aggressive Market Entry (Bid Strategy)

- Tactic:** Launched with High Max CPC (\$5.00) to maximize Auction Win Rates and secure immediate inventory access in a volatile holiday market.
- Why:** To gauge market depth and ensure delivery velocity in the first 48 hours.

Step 2: Dynamic Price Walk-Down (Optimization)

- Tactic:** Once spend velocity was confirmed, I executed a systematic bid walk-down (\$5.00 → Market Floor) to secure inventory at the lowest possible clearing price.
- Result:** Minimized waste by paying only enough to clear the daily budget, rather than overpaying for every click.

Step 3: Surgical Audience Expansion (Scale)

- Tactic:** Expanded targeting from core “In-Market” to “**Custom Intent & Likely**” segments to widen the pool without resorting to low-quality “Run-of-Network” audiences.
- Safety:** Maintained strict Exclusion Lists (Page 3) throughout to block fraud.

Key Results

- Full Budget Utilization:** Successfully deployed **\$90K surplus** within December deadline
- Controlled Efficiency:** Prevented cost blowout through daily **Bid Walk-Down optimization**
- Trust Secured:** Earned contract renewal and expanded budget authority based on execution

Strategic Application & Scalability (FIDUCIARY DUTY)

Treating Budget Like My Own Money

- Fiduciary Mindset:** Managing marketing investment is not just about spending budget, but exercising strict fiduciary responsibility to maximize return on capital, treating every corporate dollar as if it were my own.
- Ownership:** I don’t wait for instructions when opportunity arises. I have the **judgment** to make high-stakes decisions autonomously when needed.
- Risk Management:** My confidence comes from preparation. Because I had built robust **Safety Infrastructure** (Page 3), I could accelerate spend without crashing the car.
- Trust:** This execution proved that I could handle enterprise-level budgets with precision, securing expanded authority for the sustainable growth roadmap.
